## Detailed Errors

16 +1

**14 pages have slow load speed**

About this issue: Page (HTML) load speed is one of the most important ranking factors. The quicker your page loads, the higher the rankings it can receive. Moreover, fast-loading pages positively affect user experience and may increase your conversion rates. Please note that "page load speed" usually refers to the amount of time it takes for a webpage to be fully rendered by a browser. However, crawler only measures the time it takes to load a webpage's HTML code - load times for images, JavaScript and CSS are not factored in. How to fix: The main factors that negatively affect your HTML page generation time are your server's performance and the density of your webpage's HTML code. So, try to clean up your webpage's HTML code. If the problem is with your web server, you should think about moving to a better hosting service with more resources.

14 +4

**2 pages couldn't be crawled**

About this issue: This issue indicates that our crawler couldn't access the webpage. There are two possible reasons: 1. Your site's server response time is more than 5 seconds. 2. Your server refused access to your webpages. How to fix: Please contact your web hosting technical support team and ask them to fix the issue.

## Blocked from crawling

**i** About this issue: If a page cannot be accessed by search engines, it will never appear in search results. A page can be blocked from crawling either by a robots.txt file or a noindex meta tag. How to fix: Make sure that pages with valuable content are not blocked from crawling by mistake.

## Historical chart for audits

Period: February 3, 2020 (23:33) - March 16, 2020 (22:54)

### Blocked from crawling 2

## Detailed Warnings

www.adventurersloot.com.au | SEMrushBot-Desktop

2521 +22

### 1599 issues with unminified JavaScript and CSS files

About this issue: Minification is the process of removing unnecessary lines, white space and comments from the source code. Minifying JavaScript and CSS files makes their size smaller, thereby decreasing your page load time, providing a better user experience and improving your search engine rankings. For more information, please see this Google article <https://developers.google.com/web/fundamentals/performance/optimizing-content-efficiency>. How to fix: Minify your JavaScript and CSS files. If your webpage uses CSS and JS files that are hosted on an external site, contact the website owner and ask them to minify their files. If this issue doesn't affect your page load time, simply ignore it.

1599 +13

### 507 issues with blocked internal resources in robots.txt

About this issue: Blocked resources are resources (e.g., CSS, JavaScript, image files, etc.) that are blocked from crawling by a "Disallow" directive in your robots.txt file. By disallowing these files, you're preventing search engines from accessing them and, as a result, properly rendering and indexing your webpages. This, in return, may lead to lower rankings. For more information, please see [this article](https://support.google.com/webmasters/answer/6153277?hl=en). How to fix: To unblock a resource, simply update your robots.txt file.

507 +4

### 190 pages have low text-HTML ratio

About this issue: Your text to HTML ratio indicates the amount of actual text you have on your webpage compared to the amount of code. This issue is triggered when your text to HTML is 10% or less. Search engines have begun focusing on pages that contain more content. That's why a higher text to HTML ratio means your page has a better chance of getting a good position in search results. Less code increases your page's load speed and also helps your rankings. It also helps search engine robots crawl your website faster. How to fix: Split your webpage's text content and code into separate files and compare their size. If the size of your code file exceeds the size of the text file, review your page's HTML code and consider optimizing its structure and removing embedded scripts and styles.

190 +3

### 138 pages don't have meta descriptions

About this issue: Though meta descriptions don't have a direct influence on rankings, they are used by search engines to display your page's description in search results. A good description helps users know what your page is about and encourages them to click on it. If your page's meta description tag is missing, search engines will usually display its first sentence, which may be irrelevant and unappealing to users. For more information, please see these article: [Create good titles and snippets in Search Results](https://support.google.com/webmasters/answer/35624): <https://support.google.com/webmasters/answer/35624>. How to fix: In order to gain a higher click-through rate, you should ensure that all of your webpages have meta descriptions that contain relevant keywords.

138 +1

**61 pages have a low word count**

About this issue: This issue is triggered if the number of words on your webpage is less than 200. The amount of text placed on your webpage is a quality signal to search engines. Search engines prefer to provide as much information to users as possible, so pages with longer content tend to be placed higher in search results, as opposed to those with lower word counts. For more information, please view this video: <https://www.youtube.com/watch?v=w3-obcXkyA4>. How to fix: Improve your on-page content and be sure to include more than 200 meaningful words.

61 +1**25 pages don't have an h1 heading**

About this issue: While less important than <title> tags, h1 headings still help define your page's topic for search engines and users. If an <h1> tag is empty or missing, search engines may place your page lower than they would otherwise. Besides, a lack of an <h1> tag breaks your page's heading hierarchy, which is not SEO friendly. How to fix: Provide a concise, relevant h1 heading for each of your page.

25 0**1 page has a temporary redirect**

About this issue: Temporary redirects (i.e., a 302, 303 and a 307 redirect) mean that a page has been temporarily moved to a new location. Search engines will continue to index the redirected page, and no link juice or traffic is passed to the new page, which is why temporary redirects can damage your search rankings if used by mistake. How to fix: Review all pages to make sure the use of 302, 303 and 307 redirects is justified. If so, don't forget to remove them when they are no longer needed. However, if you permanently move any page, replace a 302/303/307 redirect with a 301 one.

## Detailed Notices

www.adventurersloot.com.au | SEMrushBot-Desktop

1267 -68

### 1121 resources are formatted as page link

About this issue: We detected that some links to resources are formatted with `<a href>` HTML element. An `<a>` tag with a href attribute is used to link to other webpages and must only contain a page URL. Search engines will crawl your site from page to page by following these HTML page links. When following a page link that contains a resource, for example, an image, the returned page will not contain anything except an image. This may confuse search engines and will indicate that your site has poor architecture. How to fix: Review your links. Replace `<a href>` links with tags necessary for specific resources. For example, if you'd like to add an image, use an `<img>` tag with an alt attribute describing the contents of your image.

1121 -53

### 113 pages have more than one H1 tag

About this issue: Although multiple `<h1>` tags are allowed in HTML5, we still do not recommend that you use more than one `<h1>` tag per page. Including multiple `<h1>` tags may confuse users. How to fix: Use multiple `<h2>`-`<h6>` tags instead of an `<h1>`.

113 -6

### 28 pages have only one incoming internal link

About this issue: Having very few incoming internal links means very few visits, or even none, and fewer chances of placing in search results. It is a good practice to add more incoming internal links to pages with useful content. That way, you can rest assured that users and search engines will never miss them. How to fix: Add more incoming internal links to pages with important content.

28 -11

### 2 pages are blocked from crawling

About this issue: If a page cannot be accessed by search engines, it will never appear in search results. A page can be blocked from crawling either by a robots.txt file or a noindex meta tag. How to fix: Make sure that pages with valuable content are not blocked from crawling by mistake.

2 0

**2 links on this page have no anchor text**

2 +2

About this issue: This issue is triggered if a link (either external or internal) on your website has an empty or naked anchor (i.e., anchor that uses a raw URL), or anchor text only contains symbols. Although a missing anchor doesn't prevent users and crawlers from following a link, it makes it difficult to understand what the page you're linking to is about. Also, Google considers anchor text when indexing a page. So, a missing anchor represents a lost opportunity to optimize the performance of the linked-to page in search results. How to fix: Use anchor text for your links where it is necessary. The link text must give users and search engines at least a basic idea of what the target page is about. Also, use short but descriptive text. For more information, please see the "Use link wisely" section in Google's SEO Starter Guide [https://support.google.com/webmasters/answer/7451184?hl=en&ref\\_topic=9460495&authuser=0](https://support.google.com/webmasters/answer/7451184?hl=en&ref_topic=9460495&authuser=0)

**1 page takes more than 1 second to become interactive**

1 0

About this issue: We all know that slow page-load speed negatively affects user experience. However, if a user can start interacting with your webpage within 1 second, they are much less likely to click away from this page. That's why it is important to keep a close eye on the time it takes your most important webpages to become usable, known as the Average Document Interactive Time. For more information, please see [Why Performance Matters](https://developers.google.com/web/fundamentals/performance/why-performance-matters/): <https://developers.google.com/web/fundamentals/performance/why-performance-matters/>. To evaluate your site performance, use the Site Performance report. How to fix: Make sure that users can start interacting with your most important pages as quickly as possible.

0 page URLs are longer than 200 characters

### Resources formatted as page links

**i** About this issue: We detected that some links to resources are formatted with `<a href>` HTML element. An `<a>` tag with a `href` attribute is used to link to other webpages and must only contain a page URL. Search engines will crawl your site from page to page by following these HTML page links. When following a page link that contains a resource, for example, an image, the returned page will not contain anything except an image. This may confuse search engines and will indicate that your site has poor architecture. How to fix: Review your links. Replace `<a href>` links with tags necessary for specific resources. For example, if you'd like to add an image, use an `<img>` tag with an `alt` attribute describing the contents of your image.

## Multiple h1 tags

*About this issue: Although multiple <h1> tags are allowed in HTML5, we still do not recommend that you use more than one <h1> tag per page. Including multiple <h1> tags may confuse users. How to fix: Use multiple <h2>-<h6> tags instead of an <h1>.*

## Historical chart for audits

Period: February 3, 2020 (23:33) - March 16, 2020 (22:54)

### Multiple h1 tags 100

**i** We're only displaying 100 results. To view all results, export your report to a CSV or Excel file format.

## Pages with only one internal link

**i** About this issue: Having very few incoming internal links means very few visits, or even none, and fewer chances of placing in search results. It is a good practice to add more incoming internal links to pages with useful content. That way, you can rest assured that users and search engines will never miss them. How to fix: Add more incoming internal links to pages with important content.

### Historical chart for audits

Period: February 3, 2020 (23:33) - March 16, 2020 (22:54)

## Blocked from crawling

**i** About this issue: If a page cannot be accessed by search engines, it will never appear in search results. A page can be blocked from crawling either by a robots.txt file or a noindex meta tag. How to fix: Make sure that pages with valuable content are not blocked from crawling by mistake.

### Historical chart for audits

Period: February 3, 2020 (23:33) - March 16, 2020 (22:54)

#### Blocked from crawling 2

my account - Adventurers Loot <a href="https://www.adventurersloot.com.au/my-account/">https://www.adventurersloot.com.au/my-account/</a>	March 16, 2020 (22:54)

## Links with no anchor text

**i** *About this issue: This issue is triggered if a link (either external or internal) on your website has an empty or naked anchor (i.e., anchor that uses a raw URL), or anchor text only contains symbols. Although a missing anchor doesn't prevent users and crawlers from following a link, it makes it difficult to understand what the page you're linking to is about. Also, Google considers anchor text when indexing a page. So, a missing anchor represents a lost opportunity to optimize the performance of the linked-to page in search results. How to fix: Use anchor text for your links where it is necessary. The link text must give users and search engines at least a basic idea of what the target page is about. Also, use short but descriptive text. For more information, please see the "Use link wisely" section in Google's SEO Starter Guide [https://support.google.com/webmasters/answer/7451184?hl=en&ref\\_topic=9460495&authuser=0](https://support.google.com/webmasters/answer/7451184?hl=en&ref_topic=9460495&authuser=0)*
